WORLD'S LEADING NONWOVENS EXHIBITION

FOR IMMEDIATE RELEASE

Nanosized fibres for water filtration

Geneva, 21 July 2016. Visitors and exhibitors will gather at INDEX™17, the world's leading nonwovens exhibition, in Geneva from 4th-7th April 2017, to gain first-hand knowledge of the latest developments in nonwovens, with exhibitors showcasing the astonishing functional qualities of these versatile materials.

Nonwovens are used in a wide variety of applications, from medical, cleaning and personal care products to an ever-increasing range of uses within the automotive, geotextiles and filtration industries.

The nonwovens industry has been making tremendous strides in the development of more effective media for water filtration recently, notably through the employment of nanosized fibres in sophisticated web structures.

This is just one example of the fascinating and varied functionality and attributes of nonwovens benefitting different industries. INDEX™17 will gather key players from the nonwovens industry to present their latest technologies and business solutions to a global audience, with a diverse programme of activities, including special events and interactive workshops and training courses, across four days.

Organizers are hoping to rival INDEX™14 numbers of 12,500 visitors from more than 100 countries, and 586 exhibitors from 49 countries. Interest has been particularly strong for INDEX™17, with almost 500 exhibitors booked to date, who will showcase their products and services in an exhibition stand area already covering over 19,500 m².

Click [here](#) to book your own stand space now, or register online as a visitor from early 2017. For hotel bookings and additional information, please visit our website www.index17.org.

For any further media inquiries, please contact the INDEX™17 Press Office:
